

# TalkBack Software

## For SmartReader Plus Data Loggers

### FEATURES

- Compatible with SmartReader Plus (SRP) data loggers
- Works with SRP networks (remote or local)
- Automatically downloads logged data
- Answers SRP alarms and will run a custom alarm macro

TalkBack software has two main features: (1) it automatically downloads logged information from any SmartReader Plus data logger and (2) it responds to SmartReader Plus alarms. TalkBack also works with SRP data loggers that are on a local or remote network.

### Auto-Backup Feature

To automatically download information from a SmartReader Plus data logger, TalkBack will contact the logger (direct if local, by modem if remote), download the logger's information, and save it to the computer's hard drive at user-set intervals. This prevents manually backing up logged data when the logger's memory becomes full.

### Alarm-Indicating Feature

TalkBack software can be set up to receive all tripped alarms from SmartReader Plus data loggers (initially set up in TrendReader® 2 software). When the data logger measures an exceeded value on any of its channels, the logger will call the computer and TalkBack will run an alarm macro, which has been set by you. Macro options include sounds, visual alarms, running of other programs, and calling a pager or cell phone with Caller ID capability.

Note: TalkBack software is only compatible with SmartReader Plus data loggers with a serial number of 42,508 or higher.

# Calibration Services

## For SmartReader and SmartReader Plus Data Loggers

ACR Systems' data loggers are thoroughly tested during and after assembly to ensure that our customers obtain the most accurate information possible from our products. Most of ACR Systems' data loggers can then be recalibrated as determined by usage characteristics of individual clients and ACR's own technical recommendations. In simple terms, loggers that have been regularly calibrated will help provide more reliable data logging results over the life of the logger.

### Single Data Logger

With each logger shipped, ACR Systems includes a calibration card for reference in case the logger's setup is altered. In addition, each external humidity sensor has its own unique set of calibration values that must be entered into the logger's setup. For each humidity logger and humidity sensor, a calibration label is included.

### Multiple Data Loggers

To minimize the expense of yearly calibrations for individual loggers, ACR has devised calibration packages for SmartReader and SmartReader Plus data loggers. These packages are designed to offer greater savings as larger number of calibrations are purchased.

Contact ACR Systems for order and pricing information.
